

Downloading and Using QuickBooks Student Files on a Mac Computer

Labyrinth's QuickBooks Pro textbooks are designed to teach the PC version of the QuickBooks software. Mac users *can* use these textbooks, though students should keep in mind that screenshots, discussions, and exercise instructions may not be applicable to Mac users. In addition, Mac users should follow a special procedure to access the needed student exercises files, as outlined below.

Extracting and Opening QuickBooks Student Files on a Mac

Follow these steps to extract the QuickBooks student exercise files on a Mac computer. Once extracted, remember to open the files from within QuickBooks the first time.

Tip! Mac users need StuffIt Expander!

1. If necessary, download and install the free StuffIt Expander from <http://my.smithmicro.com/win/stuffitexpander/index.html>.
2. Download the student exercise files from the student resource center or from the Labyrinth Learning website.
3. Drag and drop the downloaded file onto StuffIt Expander —or— double-click the downloaded file and choose StuffIt Expander as the application used to open it.

Important! Once extracted, the files *must* be opened through QuickBooks the first time. After they have been opened once through QuickBooks, you can simply double-click the files to open them.

Please note that Labyrinth cannot provide technical assistance for Mac users at this time.
