- Describe the advantages and disadvantages of online distribution sites
- Explain the importance of a digital marketplace distribution site

Case Study: Willa Finds a New Supplier

Cone Crazy's sales are at its peak, and Willa is out of her soft-serve ice cream mix. Her supplier can't restock for weeks, so Willa finds another supplier. The new mix needs refrigeration, but it's available now. Her customers may even prefer it.

Is it worth switching suppliers? Perhaps at least for now.

Supply Chains

- Sophisticated networks of activities to move product from creation to customer
- Elements in a supply chain
 - Supplier: Role depends on where in chain; supplies raw materials to manufacturer and wholesales product to retailer
 - Manufacturer: Creates product from initial raw materials
 - Distributor: Moves product from one area in the chain to another
 - Customer: Consumes (purchases) product

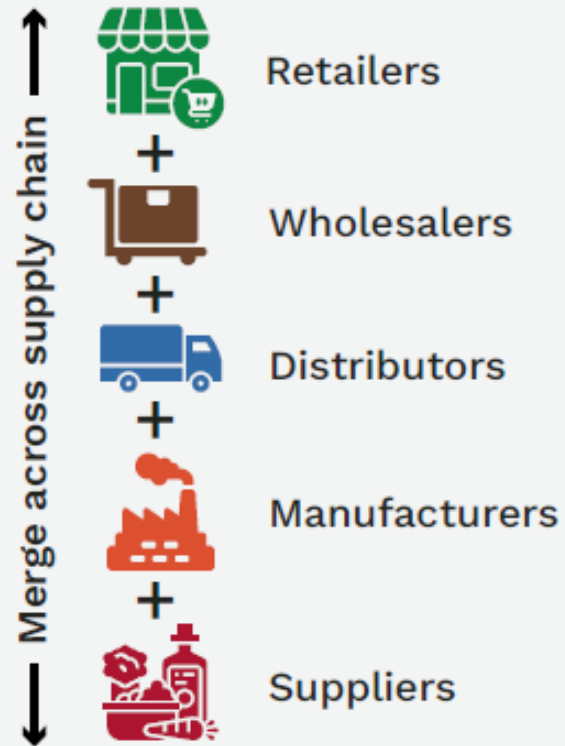

THE BASIC ELEMENTS OF A SUPPLY CHAIN

Strengthening Your Supply Chain

- Horizontal integration
 - Businesses at the same level merge to form one enterprise
 - Example
 - Exxon Mobil: Drilling, refining, manufacturing, and distributing petroleum products
- Vertical integration
 - Several businesses add value to the product (manufacturing, packaging, distributing, retailing) as it reaches end customers
 - Example
 - A local grocery store receives products from several suppliers and distributes them to shelves in its various grocery locations

 - Applies if the marketplace stores product but allows for faster delivery to consumer
- Service fees
 - Costs for returns, missing barcodes, lost shipments

CHAPTER SUMMARY

- A supply chain is the full route a product makes from creation to end user and includes suppliers, manufacturers, distributors, and the end consumer.
- Horizontal integration is the ability to own the competition for your product; vertical integration is owning the elements in the supply chain.
- Advantages of having a brick-and-mortar shop include greater sales potential and closer customer relations; on the other hand, overhead costs are high, visibility is limited, and hours of operation are far less than for online shops.
- Pros associated with online distribution sites include higher profit margins, brand messaging control, and 24/7 hours; cons include high competition, cybersecurity risks, and (again) 24/7 hours!
- Marketplace distribution sites can be convenient for the business owner, but fees are involved; the savvy entrepreneur weighs their options carefully.
